Re: Cementing Requirements per R-8541 on State S #6 & #3
Shell Western E&P In NE Drinkard Unit

Gentlemen:

As required by Division Order R-8541, it was necessary to review and approve the cementing program or recement the above referenced wells, both in Section 15, Township 21 South, Range 37 East.

A temperature survey on Well No. 6 indicates the top of cement to be at 4550 feet. This well is in relation to injection into the NEDU #604.

Additional cementing was done in 1959 to Well No. 3 and a temperature survey indicates the top of cement at 3295 feet. This cementing program affects injection into the NEDU #606.

These procedures meets the requirements set out by Division Order R-8541.

The information on the above wells has been supplied by Shell Western E&P Inc.

Very truly yours
