Re: Proposed NSP 552

Proposed NSL _____

Proposed NFC, _____

Proposed DC _____

I have examined the application dated_____

for the Pa. American Pet. Corp. State "C" Tr. 12 #3 16-21-37
Operator Lease and Well No. S-T-R

and my recommendations are as follows:

O.K. --- E.F.E.

O.K. — J.W.R.

Yours very truly,

OIL CONSERVATION COMMISSION

1. The first step is to identify the problem. In this case, the problem is that the system is not working properly.

2. The next step is to gather information. This includes checking the logs, looking at the configuration files, and talking to the users.

3. Once you have gathered information, you can start to troubleshoot. This involves testing different hypotheses and seeing if they solve the problem.

4. If you are still having trouble, you may need to consult with a specialist. This could be a vendor or a consultant.

5. Finally, once you have solved the problem, you should document the solution. This will help you and others in the future.

6. The last step is to prevent the problem from happening again. This can be done by implementing changes to the system.

7. In conclusion, troubleshooting is a process that involves identifying the problem, gathering information, testing hypotheses, consulting with specialists, documenting the solution, and preventing the problem from happening again.

8. This process is essential for anyone who works with systems, as it helps to keep them running smoothly.

9. By following these steps, you can effectively troubleshoot any problem that arises.

10. Thank you for reading this article. I hope it has been helpful.

11. If you have any questions or comments, please feel free to contact me.

12. I look forward to hearing from you.

13. Sincerely,
