knowledge. operator JUN 1 MAY SOULO PETROLEUM COMPANY Approved 19 New Mexico Oil Conservation Commission By *Va* J. I. ILL'ART Title\_\_\_Ass't. District Superintendent By\_ 

## 

A packer wakage test shall be commenced on each multiply completed well within some days after actual completion of the well, and annually thereafter as prescribed by the order authorizing the multiple completion. Such tests shill also be commenced on all multiple completions within seven days following recompletion and or chemical or fracture treatment and whenever remedial work has been done on a well during which the packer or the tubing have hen disturbed. Tests shall also be taken at any time that communication is suspected or when requested by the Commission.

2. At least is hours prior to the commencement of any packer leakage test, the operator shall notify the Commission in writing of the exact time the test is to be commenced. Offset operators shall also be so motified.

3 The packet leakage test shal, commence when both zones of the dual completion are shut-in for pressure stabilization. Both zones shall remain shut-in uctil the well-head pressure in each has stabilized and for a mininum of two boths thereafter, provided however, that they need not remain shut-in more than 14 hours.

A for Flow test No. 1, one zone of the dual completion shall be produced at the normal rate of production while the other zone remains shut-in. Such test shall be continued until the flowing wellhead pressure has become stabilized and for a minimum of wo hours thereafter, provide however, that the flow test need not continue for more than 24 hours 5. Following completion of Flow Test No. 1, the well shall  $\log n = b n$  show in, in accordance with Paragraph 3 above.

6. Flow Test No. 2 shall be conducted even though no leak was indicate during Flow Test No. 1. Procedure for Flow Test No. 2 is to be the sa as for Flow Test No. 1 except that the previously produced zone shall main shut-in while the previously shut-in zone is produced.

7. All pressures, throughout the entire test, shall be continuously a measured and recorded with mecording pressure gauges, the accuracy of which must be checked with a deadweight tester at least twice once at the beginning and once at the end of each flow test.

8. The results of the above-described tests shall be filed to tripulate within 15 days after completion of the test. Tests shall be third with the appropriate Listrict Office of the New Mexico Oil Conservation bermission on Southeast New Mexico Packer Leakage Test form Review 11... together with the orig nal pressure recording gauge charts with all the deadweight pressures which were taken indicated thereon. In let of filing the aforesaid charts, the operator may construct a pressure vertime curve for each zone of each test, indicating thereon all pressure changes which may be reflected by the gauge charts as well as all dead weight pressure readings which were taken. If the pressure curve is so mitted, the original chart must be permanently filed in the operator sh office Form C-116 shell also accompany the Packer Leakage Test Form when the test period coincides with a gas-oil ratio test period.
