Section 18, T21S, R37E

Gentlemen:

DHC-641 issued March 24, 1987, authorized the downhole commingling of the Blinbry, Drinlard and Paddock zones in the above well. The allowables for these zones had been cancelled due to communication pending the approval of your authority to commingle in the wellbore. In order to get your allowables reinstated, please submit a "special" downhole commingled gas/oil ratio test broken down according to the percentages established by DHC-641.

I must point out that you will still be required to submit a zone segregation test on this well since the Penrose Skelly zone is not authorized to be downhole commingled. This test will be due in November.

If you have questions, please feel free to contact this office.

Very truly yours,

OIL CONSERVATION DIVISION
