1. A packer leakage test shall be commenced on each multiply completed well within seven days after actual completion of the well, and annually thereafter as prescribed by the order authorizing the multiple completion. Such tests shall also be commenced on all multiple completions within seven days following recompletion and/or chemical or fracture treatment, and whenever remediai work has been done on a well during which the packer or the tubing have been disturbed. Tests shall also be taken at any time that communication is suspected or when requested by the Commission.

2. At least 72 hours prior to the commencement of any packer leakage test, the operator shall notify the Commission in writing of the exact time the test is to be commenced. Offset operators shall also be so notified.

3. The picker leakage test shall commence when both zones of the dual completion are shut-in for pressure stabilization. Both zones shall remain shut-in until the well-nead pressure in each has stabilized and for a mini-mum of two hours thereafter, provided however, that they need not remain shut-in more than 24 hours.

4. For Elow Test No. 1, one zone of the dual completion shall be produced at the normal rate of production while the other zone remains shit-in. Such test shall be continued until the flowing wellhead pressure has become stabilized and for a minimum of two hours thereafter, provided however, that the flow jest need not continue for more than 24 hours. 5. Following the state of clow Test No. 1, the well shall again be shuttly by ordered in Prograph 3 above.

6. Flow Test 50 2 shall be conducted even though no leak was indicated during flow Test 50 1. Procedure for Flow Test No. 2 is to be the same as for Flow Test Schler can be the same as for Flow Test Schler can be provided zone shall remain shur-in while the previously shut-in zone is produced.

7 All preventes. The appear the entire test, shall be continuously measured and .Foorded with recording pressure gauges, the accuracy of which must be checked with a deadweight tester at least twice, once at the beginning and once in the end, or each flow test.

8 The results of the above-described tests shall be filed in triplicate within 15 days after completion of the test. Tests shall be filed with the appropriate files of offices of the New Mexico Oil Conservation Commission on Southeast his descent Decker Leakage Test Form Revised 11-1-58, together with he original pressure recording gauge charts with all the deadweight pressures which were taken indicated thereon. In lieu of filing the aforeast his of the year tor may construct a pressure versus time cares for each office words the gauge charts as well as all deadweight pressure requires which were taken. If the pressure curve is submitted, the couplet of the permanently filed in the operator's office, the for state of the submany the Dacker Leakage Test Form when the test scale of the submany the Dacker Leakage Test Form
