OIL CONSERVATION COMMISSION
HOBBE OFFICE

of pressure between the formations, and the gas-oil ratio tests on the Drinkard formation are evidence that the Mary E. Wantz No. 3-D has been dually completed as an oil well in the Drinkard formation and a gas well in the Tubb formation in such a manner that there is no co-mingling within the well bore of the hydrocarbons from the two formations.

Yours very truly,

E. L. SHAFER
Supt., New Mexico District
West Texas-New Mexico Division
Production Department

of pressure between the formations, and the gas-oil ratio tests on the
Drinkard formation are evidence that the Mary M. Wanda No. 3-D has been
usually completed as an oil well in the Drinkard formation and a gas
well in the top formation in such a manner that there is no co-mingling
within the well bore of the hydrocarbons from the two formations.

Yours very truly,

E. L. CHAVEZ
Supt., New Mexico District
West Texas-New Mexico Division
Production Department
