FLOW TEST NO. 1

Both zones shut-in at (hour, date): Feb. 2, 1987 9:00 AM

Well opened at (hour, date): Feb. 12, 1987 9:00 AM Upper Completion  
Lower Completion

Indicate by ( X ) the zone producing..... X

Pressure at beginning of test..... 278 146

Stabilized? (Yes or No)..... yes yes

Maximum pressure during test..... 282 146

Minimum pressure during test..... 278 40

Pressure at conclusion of test..... 282 40

Pressure change during test (Maximum minus Minimum)..... +4 -106

Was pressure change an increase or a decrease?..... Inc. dec.

Well closed at (hour, date): Feb. 14, 1987 9:00 AM Total Time On  
Production 24

Oil Production 3 bbls; Grav. 34.560; Gas Production 162 MCF; GOR 54,000 to 1

Remarks \_\_\_\_\_

FLOW TEST NO. 2

Well opened at (hour, date): Feb. 15, 1987 @ 9:00 AM Upper Completion  
Lower Completion

Indicate by ( X ) the zone producing..... X

Pressure at beginning of test..... 284 142

Stabilized? (Yes or No)..... yes yes

Maximum pressure during test..... 284 144

Minimum pressure during test..... 22 142

Pressure at conclusion of test..... 22 144

Pressure change during test (Maximum minus Minimum)..... -262 +2

Was pressure change an increase or a decrease?..... dec. Inc.

Well closed at (hour, date) Feb. 16, 1987 @ 9:00 AM Total time on  
Production 24

Oil Production 0 bbls; Grav. —; Gas Production 22 MCF; GOR —

REMARKS: Well on Blancog Logg. up to 10' using  
Packer Valve.

I hereby certify that the information herein contained is true and complete to the best of my knowledge.

# BOULDER AND NEW MEXICO PACER LEAKAGE TEST INSTRUCTIONS

1. A packer leakage test shall be commenced on each multiple completed well within seven days after actual completion of the well, and annually thereafter as prescribed by the order authorizing the multiple completion. Such tests shall also be commenced on all multiple completions within seven days following recompletion and/or chemical or fracture treatment, and whenever possible work has been done on a well during which the packer or the tubing have been disturbed. Tests shall also be taken at any time that corrosion is suspected or when requested by the Commission.

2. At least 72 hours prior to the commencement of any packer leakage test, the operator shall notify the Commission in writing of the exact time the test is to be commenced. Offcut operators shall also be so notified.

3. The packer leakage test shall commence when both rooms of the dual completion are shut-in for pressure stabilization. Both rooms shall remain shut-in until the well-head pressures in each has stabilized and for a minimum of two hours thereafter, provided however, that they need not remain shut-in more than 24 hours.

4. For Flow Test No. 1, one zone of the dual completion shall be produced at the normal rate of production while the other zone remains shut-in. Such test shall be continued until the flowing wellhead pressure has become stabilized and for a minimum of two hours thereafter, provided however, that the flow test need not continue for more than 24 hours.

2. Following completion of Flow Test No. 1, the well shall again be shut in, in accordance with Paragraph 3 above.

G. Flow Test No. 2 shall be conducted even though no leak was indicated during Flow Test No. 1. Procedure for flow test for 2 is to be the same as for Flow Test No. 1 except that the previously produced zone shall be main shut in while the previously shut-in zone is produced.

7. All pressures, throughout the entire test, shall be continuously measured and recorded with recording pressure gauges, the accuracy of which must be checked with a deadweight tester at least twice, once at the beginning and once at the end, of each flow test.

4 The results of the above-described tests shall be filed in triplicate within 15 days after completion of the test. Tests shall be filed with the appropriate District Office of the New Mexico Oil Conservation Commission on Southeast New Mexico Backer Leakage Test Form Revised in 1956 together with the original pressure recording gauge charts and the deadweight pressures which were taken indicative of the pressure at the time of filling the aforesaid charts. The operator shall also construct a pressure versus time curve and attach it to the charts indicating thereon all pertinent pressures which may be reflected by the gauge charts as well as all deadweight pressure readings which were taken. If the pressure curve is submitted, the original chart must be permanently filed in the operator's office. Form C-116 shall also accompany the Backer Leakage Test Form when the test period coincides with a gas-oil ratio test period.
