

Eunice, New Mexico  
September 26, 1955

Mr. R. C. Lannen - Eunice, New Mexico

BACK PRESSURE TEST - HAA B-9 NO. 5 - SECTION 9, T. 21N,  
R. 37E, DIA COUNTY, NEW MEXICO

On September 17, 1955, a back pressure test was taken to determine the theoretical open flow capacity of the Tubb gas zone at zero bottom hole pressure, and the deliverability characteristics at various rates of flow. A calculated open flow potential of 2075 MCF gas per day was obtained, based on a ten hour back pressure test.

Attached are curves representing the calculated open flow potential and deliverability, and a chart tabulating the data obtained by this test.

Calculated open flow potential	2075	MCF/D
Deliverability at 600 psig	1830	MCF/D
Deliverability at 150 psig	2040	MCF/D
Shut in pressure	1846.2	PSIA
COP & acid content of gas is not available at this time.
