SHELL OIL COMPANY

February 20, 1953

Subject: Dual Completion Shell  
Argo 1, Tubb (Gas)  
Drinkard (Oil)

New Mexico Oil Conservation Commission  
Hobbs, New Mexico

15-21-37

Gentlemen:

In compliance with Order No. R-192 concerning Case No. 397 (Application of Shell Oil Company to dually complete and produce Argo 1 as a Tubb (gas)-Drinkard (oil) well) we are enclosing a diagrammatic sketch of the mechanical installation in the subject well. As shown on this sketch, the Tubb gas zone is separated from the Drinkard oil zone by a Baker production packer; the Drinkard oil will be produced through the tubing and the Tubb gas will be produced through the casing-tubing annulus. The tubing string contains a side-door choke assembly above the packer which permits the recording of reservoir pressures of each zone.

A back pressure test of the Tubb gas zone has been taken and the details of this test are shown on the attached form C-122.

We will be pleased to furnish any further data you may need or to make any additional tests you may desire.

Very truly yours,

  
C. R. Bickel  
Division Manager
