Hobbs, New Mexico

February 24, 1953

Subject: Dual Completion Shell
State 1, Tubb (gas)
Drinkard (oil)

New Mexico Conservation Commission
Hobbs, New Mexico

15-21-37

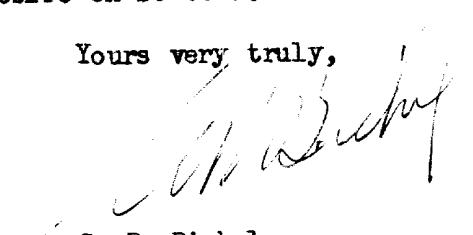

Gentlemen:

In compliance with Order No. R-190 concerning Case No. 395 (application of Shell Oil Company to dually complete and produce State 1 as a Tubb (gas)-Drinkard (oil) well), we are enclosing a diagrammatic sketch of the mechanical installation in the subject well. As shown on this sketch, the Tubb gas zone is separated from the Drinkard oil zone by a Baker retainer production packer; the Drinkard oil will be produced through the tubing and the Tubb gas is to be produced through the casing-tubing annulus. The tubing string contains a side-door choke assembly above the packer which permits the recording of reservoir pressures of each zone.

A back pressure test of the Tubb has been taken and the details of this test are shown on the attached form C-122.

We will be pleased to furnish any further data you may need or to make any additional tests you may desire on State 1.

Yours very truly,

C. R. Bickel
Division Manager
