RE: Administrative Order DHC-832
A. M. York #2
Unit A, Sec. 20, T21S, R37E

Dear Mr. Sexton:

In reference to DHC-832 we submit the following recommendation for allocation of production from this well:

Blinebry Oil & Gas Oil 15%, Gas 57%, Water 10% Drinkard Oil 85%, Gas 43%, Water 90%

These percentages were determined from a well test average for the last three months on the Blinebry formation and previous GOR tests on the Drinkard Formation.

Due to a well stimulation at the time of commingle, I feel prior well tests will give us a more accurate allocation. If you have any questions concerning this allocation, you may contact me at 391-1621.

Very truly yours,

Alum

James D. Cogburn Operations Coordinator
