## PACKER LEAKAGE TEST

Operator Sinclair Oil & Ges Company	Pool (Upper Co	mpletion)	_Tubbs	
Lease A M York MBM Well 2 Location: Unit A , S. 20 , T 21 , R 27,	Pool (Lower Co		Drinkard	nty, N. M.
	st Shut-In			10 :5
116-16		Completion	Lower Comple	tion
Shut-in at (hour, date)	R.00	AM 7-3-KR		
Pressure stabilized at (hour, date)		PM 7-1-K4	11.00 PM 7-1	
Length of time required to stabilize (hour	•	<b>F8.</b>	15-bre.	
Flow T	<u>'est No. 1</u>			
Test commenced at (hour, date) 4:00 AN 7-	2-58		Choke size	26/64
Completion producing <u>Drinkard</u> Comp	eletion shut-in Upper Comp		Lower Comple	tion
Stabilized pressure at beginning of test	350	psi	LTO	psi
Maximum pressure during test	265	psi	310	psi
Minimum pressure during test  Pressure at end of test	7,7-	psi psi	2 <del>60</del>	psi psi
Maximum pressure change during test		si	<b>305</b>	psi
Oil flow rate during test: 42 BOPD ba		BO in		hours.
	est Shut-In	MCF in		hours,
	Uncer	Completion	Lower Comple	tion
Shut-in at (hour, date)		AV 9 7 86	4.00 W #	0 74
Pressure stabilized at (hour, date) Length of time required to stabilize (hour		DM # 1.26	-7:00 FM 7-	2-58
	est No. 2	-42-5	ll krav	······································
Test commenced at (hour, date) 1:00 AM Completion producing Co	7-3-58 mpletion shut-	•	Choke size	24/64
	Upper Comp		Lower Complet	ion
Stabilized pressure at beginning of test  Maximum pressure during test		psi		psi
Minimum pressure during test	180	psi psi		psi psi
Pressure at end of test	180	psi		psi
Maximum pressure change during test Oil flow rate during test:BOPD ba	sed on * o	psi BO in		psi hours.
Gas flow rate during test:MCFPD b	ased on	MCF in		hours.
Test performed by w. H. Heisler	Title	Barineer		
Witnessed by		THE THOUSE		
REMARKS:				
NOTE: Recording gauge pressure charts, to	st data sheet,	and a grap	nic depiction	of all
phases of the test shall be submitted with	this report.			
AFFIDAVIT:				
I HEREBY CERTIFY that all condi	tions presenth	and her Odd C	ongowertion C	ommission
of the State of New Mexico for this packer	leakage test	were complic	ed with and c	arried
out in full, and that all dates and facts	set forth in t	his form an	d all attached	d material
are true and correct.

## INSTRUCTIONS (SOUTHEAST NEW MEXICO ONLY)

- 1. At least 24 hours prior to the commencement of this test, the operator shall notify the District Office of the Oil Conservation Commission in writing of the exact time said test is to be commenced.
- 2. The packer leakage test shall commence with both sides of the completion shut-in. Both sides of the completion must be shut-in a sufficient length of time to allow for complete-stabilization of both wellhead pressures, and for a minimum of 2 hours thereafter- this minimum of 2 hours shut-in must show on the charts of the pressure recorder and also must appear on the data sheet.
- 3. For Flow Test No. 1, one side of the dual completion shall be produced with the other side shut-in. Such test shall be continued until the flowing wellhead pressure has become stabilized and for a minimum of 2 hours thereafter, and shall be at a rate of flow approximating the normal rate of flow for the zone being produced.
- 4. Following the completion of flow test No. 1, the well will again be shut-in, and remain so until the wellhead pressures have again become stabilized and for a minimum of 2 hours thereafter.
- 5. Flow Test No. 2 shall be performed with the previously shut-in side of the dual completion flowing and with the flowing side of the completion used in test number 1 remaining shut-in. This test shall be conducted exactly as outlined under Flow Test No. 1, and must be performed even though no leak was indicated by Flow Test No. 1.
- 6. All pressures, throughout the entire test, must be continuously measured and recorded with recording pressure gauges.
- 7. The accuracy of the recording gauges shall be checked at regular intervals throughout the test with a dead weight test gauge, and such readings shall be recorded on the test data sheet provided.
- 8. For any well on which the wellhead pressures will not stabilize in (24) twenty four hours or less, the minimum producing or shut-in time allowed for stabilization shall be (24) twenty-four hours.
- 9. This form must be completed and filed in duplicate with the District Office of the Oil Conservation Commission within 15 days following the completion of the testing, and must be accompanied by:
  - a. all of the charts, or copies thereof, used on the pressure recorders during the test.
  - b. the test data-sheet (s), or copies thereof, required under paragraph 7 above.
  - c. a graph depicting the pressures and their changes, for both sides of the completion over the entire test.
- 10. This packer leakage test shall be performed upon dual completion of any new wells so approved by the Commission. This test shall also be required each year during the annual GOR test for the lowermost oil zone or oil pool so concerned. The Commission may also request packer leakage tests at any time they feel that a new test is desirable.
