9. Regarding any gas or oil that may be produced during drilling or completion operations, this hydrocarbon will be piped a safe distance from the drilling rig and burned. Blowout preventers consisting of pipe and blind rams plus hydril will be used during drilling operations to provide safety during drilling. Also, a mud separator will be used when necessary to separate any gas out of mud system, and gas will be piped a safe distance from rig and burned in pit. A schematic of blowout preventers is shown on Exhibit "D". Pneumatic and hand controls plus mud and gas separator tied to flow line will be used but are not shown on diagram.

Very truly yours,

THE SUPERIOR OIL COMPANY
