Re: Allocation Formula for  
H. T. Mattern (NCT-C) No. 9  
Section 7, T-21-S, R-37-E

Gentlemen:

This is to advise that the allocation for downhole commingled production from the Blinebry and Drinkard Pools for the subject well as requested in your letter of June 25, 1979, is acceptable with this office.

Blinebry Oil	49%	Blinebry Gas	14%
Drinkard Oil	51%	Drinkard Gas	86%

However, since the test subsequent to commingling shows less production than was shown from the separate zones prior to commingling, please re-test the well within 30 days and submit the results to this office to indicate whether or not the downhole commingling has actually damaged the zones.

Yours very truly,

OIL CONSERVATION DIVISION

Jerry Sexton  
Supervisor, District 1
