Dear Sir:

Please find enclosed, the diagram for our Blow Out Preventor stack for the production string on the Belco-Federal 12 #1. The Blow Out Preventor stack for the intermediate casing will be the same with the exception that we will not run a hydril, and it will be a 12" 900 series. Please note that the fill up connection will be above the Blow Out Preventors. Also note in the asterisk #1 and #2, that we will run an extra hydraulic valve under asterisk #1, and a manual valve under asterisk #2. We will also use a Rotating Stripper Head below the intermediate casing, and an upper and lower Kelly-cock valve at all times.

If I can be of any further assistance to you, please don't hesitate to call.

Yours truly,

MCVAY DRILLING COMPANY

  
Jim McVay
