During gas well production, gas can be produced at a rate not exceeding the top unit allowable for the pool in which well is located, by more than ten percent. Operator is encouraged to take advantage of this 25 percent tolerance in order that the well can be assigned increased allowables when authorized by the Division.

Gas volume, cu ft, measured at a pressure base of 15.025 psia and a temperature of 60 deg. F.

Report casing pressure in lieu of tubing pressure for any well producing through casing

(See Rule 301, and Rules 28 & appropriate pool rules.)

I hereby certify that the above information is true and complete to the best of my knowledge and belief.
