Re: Lockhart B-31 #9
Lea County, New Mexico

Paul:

Enclosed is the log on the Lockhart B-31 #9 which should help in correlating the base of the Jalmat Pool, which I feel is below our lowest perforation. My correlation has our lowest perforation being the equivalent in depth of 3758' on the dual spaced neutron log of the Texaco J. K. Rector #6, with the top of the Queen being at 3885' in Texaco's well, which I feel would be an equivalent depth of 4043' in our Lockhart B-31 #9.

If you still feel we are in error, then I will be happy to meet with you and discuss this matter in person. Please let me know what your decision is, at your earliest convenience.

Yours truly,

Steven L. Burleson
