Bell Lake Unit Penn. A/C 1 March 25 1963

Well No. 2 is located 660 ft. from ~~XXXX~~ S line and 3300 ft. from E line of sec. 30

SE/4 of SW/4 Sec. 30 23S 34E NMM

($\frac{1}{4}$ Sec. and Sec. No.) (Twp.) (Range) (Meridian)

Bell Lake **Pennsylvanian** **Lea** **New Mexico**
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 3642 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is proposed to plugback and recomplete Bell Lake Unit No. 2. The following procedure is to be used: Set 20-sk. cement plug from 8910-9000'. Perforate 8856-66' w/2 JSPP and treat w/500 gal. MCA. Swab test. If dry, set CIBP at 8800; if water productive, squeeze w/100 sacks cement. Perf. 8677-92', 8700-08' and 8728-34' w/2 JSPP. Treat perfs. w/20,000 gals. LSTNE acid. Swab test. If commercial, place on production. If non-commercial, set CIBP at 8600 and shut-in.

Permission is requested to perform the above work.

* The setting of a bridge plug does not constitute permanent abandonment of the lower perforations. Should conditions warrant, at the time of permanent abandonment, the bridge plug must be drilled out and cement placed across all perforations.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.

Company **Continental Oil Company**
