DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

This well was completed 10-30-54 at a TD of 13,034', PB 12,690'.

It is our intention to deepen the well to 13,900', run an induction log, Microlog and Gamma Ray-Sonic log from 12,469'-13,900', run a 5" flush-joint liner and cement #/200 ax at 13,900' and perforate and acidize the Morrow Sand as determined from the logs.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
