The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging jobs, cementing points, and all other important proposed work)

It is intended to drill this well with rotary tools at the above location to an estimated TD of 3840'. Casing will be cemented in accordance with U.S.G.S. standards and other special requirements will be complied with.

The following casing pattern is planned: 8 5/8" OD set at 350' with 350 sacks, cement to circulate; 5 1/2" OD set at 3840' with 1100 sacks, cement to return to 1250'. Actual amount of cement necessary to set 5 1/2" casing will be determined by caliper survey.

Permission is requested to produce this well upon completion.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
