Meyer B-33
Well No. **1** is located **660** ft. from **S** line and **660** ft. from **W** line of sec. **33**
SW/4 SE/4 Sec. 33 **22-S** **36-E** **NMPM**
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
NMFU **Lee** **New Mexico**
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is **3469** ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

On September 16, 1963, we submitted a notice of intention to treat the subject well with a spearhead of 2,000 gal. LSTNE acid; then frac with 40,000 gals of gelled water using "ADOMITE AQUA" Additives and "ADOMAL" Additives in 3 stages using 180 ball sealers.

This notice of intention was approved on Sept. 17, 1963 by Mr. J. L. Gordon, Acting District Engineer for the U.S. Geological Survey, Hobbs, New Mexico.

In checking the mechanical conditions of the well, prior to performing the work, it was found that sand filled the well bore to 3111' covering most of the intervals that are open. In view of these circumstances, we wish to cancel the aforementioned notice of intention since performance of the work would not be practical.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
