South Dakota **Lea** **New Mexico**
 (Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 3457 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

This well was completed 3-6-58 at TD 3775' in the Seven Rivers 3650-3736'.
Well is now TSD due to water intrusion.

To restore the well to producing status it is proposed to grab test the individual zones perforated in order to determine the source of water entry and squeeze the water productive intervals. If the remaining zones are incapable of producing top allowable, additional zones in the Jalmat Pool will be perforated. It is anticipated that when the water productive intervals are eliminated the well will be reclassified as a Jalmat well.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
