17. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work) SEE RULE 1103.

The new perforations from 3637-3674 were acidized a second time on October 25 with 1500 gallons 15% NEFE acid. Swab testing indicated no oil. On November 2 these perforations were squeezed with 100 sacks of Class "C" cement. During this squeeze job the cement went around the RBP at 3694 and came out the existing perfs at 3700-3780. Cement was drilled from 3700'-3765'.

On November 5 the tubing rods and pump were ran back into well. The well has not pumped any oil. It is believed that the old perfs were squeezed off. Marathon will reperforate and acidize these old perfs.

18. I hereby certify that the information above is true and complete to the best of my knowledge and belief.
