The elevation of the derrick floor above sea level is 3431 ft.

### DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

All possible productive zones have been tested and remedial work to return the well to a producing status cannot be justified.

We now propose to plug and abandon in the following manner:

1. Set 200' cnt. Plug (25 sx) from 3600' to 3400'.
2. Pull 2" tbg.
3. Cut & pull approx. 700' of 5-1/2" casing.
4. Fill csg. w/10 lb. mud & set 20 sx cnt plug at top of 5-1/2" csg.
5. Set 3' sx cnt plug across the shoe of the surface pipe.
6. Set 10 sx cnt plug at surface.
7. Erect 4" marker extending 4' above surface with well name & location inscribed thereon, restore location to original condition.

A subsequent report will be filed upon completion of this work.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
