(County or Subdivision)

New Mexico
(State or Territory)The elevation of the derrick floor above sea level is 3495 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

On 9-30-51, the subject well was treated with 3,000 gallons acid through perforations from 3687' to 3717'.

Production before treating was 36 bbls. oil and 22 bbls. water per day by gas lift. Subsequent to treating the well produced 37 bbls. oil and 25 bbls. water per day by gas lift.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
