The elevation of the derrick floor above sea level is 3485 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

The subject well is presently producing 36 bbls. oil and 22 bbls. water per day by gas lift, through perforations from 3684 to 3717'.

In an effort to increase oil production, and in accordance with Mr. D. F. Jacob's telephone conversation of this date with Mr. Don Russell of the U. S. Geological Survey, it is proposed to treat the perforations with 3000 gallons acid.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.

Company Continental Oil Company
