DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work.)

Studies performed on this well conclude that remedial work to return the well to a producing status cannot be justified.

We now propose to plug and abandon in the following manner:

1. Set 150' Cmt plug (20 sx) from 3800' to 3650'.
2. Cut and pull approx. 1150' of 5 1/2" casing.
3. Fill csg w/10 lb mud and set 20 sx cmt plug at top of 5 1/2" csg.
4. Set 10 sx cmt plug at surface.
5. Erect 4" marker extending 4' above surface with well name and location inscribed thereon. Restore location to original condition.

A subsequent report will be filed upon completion of this work.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
