Well No. 2 is located 990 ft. from N line and 1650 ft. from E line of sec. 5

SW 1/4 Sec. 5 23E 36E (Meridian)
(1/4 Sec. and Sec. No.) (Twp.) (Range)
Cooper-Jai Lee New Mexico
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 3469 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Trebol Oil Co. Federal Farnsey No. 2 was completed December 2, 1953, producing 250 barrels of fluid per day (24.8% oil and 75.2% water through casing perforations from 3772 to 3790 feet). At the present time this well produces 100% water at the rate of 350 barrels per day. We propose to plug off the casing perforations from 3772 to 3790 feet, perforate from 3696 to 3723, acidize the new perforations and attempt to recompleat.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
