DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

During June 1961, Danciger A-8 No. 2 produced an average of 5,300 MCF per day.

We propose to kill the well, run 2" TBG/bit, clean out to PB, pull TBG with bit, run 2" TBG, tag PB, pull 2 joints, land in head, swab off and place on production.

| I understand that this plan of work must receive approval in writing | by the Geological Survey before operations may be commenced. |
