

OIL CONSERVATION COMMISSION

Santa Fe, New Mexico

MISCELLANEOUS REPORTS ON WELLS

RECEIVED
OCT 18 1945
RECEIVED

HOBBS OFFICE

Submit this report in triplicate to the Oil Conservation Commission or its proper agent within ten days after the work specified is completed. It should be signed and sworn to before a notary public for reports on beginning drilling operations, results of shooting well, results of test of casing shut-off, result of plugging of well, and other important operations, even though the work was witnessed by an agent of the Commission. Reports on minor operations need not be signed and sworn to before a notary public. See additional instructions in the Rules and Regulations of the Commission.

Indicate nature of report by checking below:

REPORT ON BEGINNING DRILLING OPERATIONS	<input checked="" type="checkbox"/>	REPORT ON REPAIRING WELL	
REPORT ON RESULT OF SHOOTING OR CHEMICAL TREATMENT OF WELL		REPORT ON PULLING OR OTHERWISE ALTERING CASING	
REPORT ON RESULT OF TEST OF CASING SHUT-OFF		REPORT ON DEEPENING WELL	
REPORT ON RESULT OF PLUGGING OF WELL			

Midland, Texas, October 17, 1945

Title

THEORY OF THE EARTH

1. THE EARTH'S CRUST

The crust is the outermost layer of the Earth, composed of solid rock. It is the layer that we live on and is the layer that we see.

The crust is divided into two main types: continental crust and oceanic crust. Continental crust is thicker and less dense than oceanic crust. Oceanic crust is thinner and more dense than continental crust. The boundary between the two is the mid-ocean ridge.

The crust is also divided into tectonic plates. These plates move around the Earth's surface, creating earthquakes and volcanoes. The movement of the plates is driven by convection currents in the mantle.

The crust is the layer of the Earth that we live on and is the layer that we see.

2. THE EARTH'S MANTLE

The mantle is the layer of the Earth that lies below the crust.

The mantle is divided into two main types: upper mantle and lower mantle.

The upper mantle is the layer of the mantle that lies above the lower mantle. It is the layer that is closest to the crust and is the layer that is most visible.

The lower mantle is the layer of the mantle that lies below the upper mantle. It is the layer that is furthest from the crust and is the layer that is least visible.

The mantle is the layer of the Earth that lies below the crust and is the layer that we see.

The mantle is the layer of the Earth that lies below the crust and is the layer that we see.

The mantle is the layer of the Earth that lies below the crust and is the layer that we see.

The mantle is the layer of the Earth that lies below the crust and is the layer that we see.

The mantle is the layer of the Earth that lies below the crust and is the layer that we see.

3. THE EARTH'S CORE

The core is the innermost layer of the Earth, composed of solid rock.

The core is divided into two main types: outer core and inner core. The outer core is the layer of the core that lies above the inner core.

The inner core is the layer of the core that lies below the outer core.

The core is the innermost layer of the Earth, composed of solid rock. It is the layer that we live on and is the layer that we see.

The core is the innermost layer of the Earth, composed of solid rock. It is the layer that we live on and is the layer that we see.

The core is the innermost layer of the Earth, composed of solid rock. It is the layer that we live on and is the layer that we see.

The core is the innermost layer of the Earth, composed of solid rock. It is the layer that we live on and is the layer that we see.

The core is the innermost layer of the Earth, composed of solid rock. It is the layer that we live on and is the layer that we see.

The core is the innermost layer of the Earth, composed of solid rock. It is the layer that we live on and is the layer that we see.
