Re: Administrative Order No. DC-213
Cities Service Brunson C #6, Sec.
3-22S-37E, Lea County, N. M.

Gentlemen:

In accordance with Administrative Order No. DC-213, we are attaching the following:

1. A diagrammatic sketch of the mechanical installation actually used to complete and produce the seal between the strata.
2. A special report on the oil production and gas/oil ratio of the Drinkard oil producing zone.
3. A special report on the bottom hole pressure of the Drinkard oil producing zone.

The Tubb gas zone potential on the Brunson C #6 indicated 2428 MCFFPD with 48 barrels 59.4° condensate and was reported on Form C-104, August 29, 1955.

A packer leakage test September 11, 1955, indicated a flowing tubing pressure of 300 psi for the Drinkard zone, with the annular pressure of the Tubb zone steady at 1940 psi. This would indicate that there is no communication between the strata.

Very truly yours,

CITIES SERVICE OIL COMPANY
