FULL DETAILS OF PROPOSED PLAN OF WORK
(FOLLOW INSTRUCTIONS IN THE RULES AND REGULATIONS)

Brunson "C" No. 6 was completed as an oil well in the Drinkard Pool in September, 1949. It is likely that this well will flow to depletion. It is proposed to dually complete this well as a Drinkard oil well and a Tubb gas well by perforating the 5½" casing in the Tubb gas zone, setting a production packer between the two zones and completing in the usual manner. It is further proposed to acidize the Tubb zone with 10,000 gallons of acid. Formal application to dually complete has been submitted.
