

DRILL STEEL TESTS TAKEN ON MID-CONTINENT - Eva Owens #1
MID-CONTINENT PETROLEUM CORPORATION

TULSA, OKLAHOMA

- #1 From 6400-6500. 5/8" BHC. Tool open 45 minutes. Gas to surface in 5 minutes, Sprayed drilling fluid in 10 minutes, light spray of oil and distillate in 25 minutes. Recovered 150' clean oil, no water. Flowing bottom hole pressure 600# 10 minutes, shut in pressure 2300#.
- #2 From 6495-6550. 5/8" BHC. Tool open 2 hours. Gas in 8 minutes, good blow of air for 15 minutes, slight blow for 70 minutes. Recovered 360' oil and gas cut mud. Estimated 2 bbls clean oil. Tool evidently did not stay open, plugged at end of 50 minutes. Bottom hole chart showed flowing pressure zero for 15 minutes, building up to 2200# at end of 50 minutes. Test not satisfactory.
- #3 From 6494-6600. 5/8" BHC. Tool open 2 hours and 35 minutes. Gas in 11 minutes, recovered 690' oil and gas cut mud. No water.
