Gentlemen:

Please find enclosed your Forms C-103, C-104, and C-116. The subject well was originally a dual completion in the Blinebry-Drinkard with the Drinkard temporarily abandoned by a blanking plug set in N nipple at 6167' in November, 1985. Last Blinebry production was August, 1988. All perforations were squeezed and cement drilled out to 6490'. Drinkard Pool was perforated from 6335 - 6399', then acidized and fractured. A C-116 is enclosed to establish an allowable for this well.

Thank you for your consideration of this matter. If you have any questions, please call.

Yours very truly,

Ronnie H. Westbrtook
