THE EFFECT OF VARIOUS FACTORS ON THE RATE OF
GROWTH OF THE HUMAN BODY
J. H. HALL, M.D., AND J. H. HALL, JR., M.D.
The University of Chicago, Chicago, Ill.

The purpose of this study was to determine the effect of various factors on the rate of growth of the human body. The factors studied were age, sex, and race. The results are presented in the following tables.

The first table shows the average height and weight of the human body at different ages. The second table shows the average height and weight of the human body at different ages, separated by sex. The third table shows the average height and weight of the human body at different ages, separated by race.

The results of this study show that the rate of growth of the human body is affected by age, sex, and race. The rate of growth is highest in the early years of life and decreases as age increases. The rate of growth is also affected by sex and race.

The following tables show the average height and weight of the human body at different ages, separated by sex and race.
