Hobbs, New Mexico

Attention: Mr. C. L. Wade

Gentlemen:

As we have previously discussed, there are three perforations in your R. L. Clifton No. 2 located in Unit M of Section 4, T-22-S, R-37-E, that are above the vertical limits of the Drinkard Pool. In your application to do this work, you stated that you proposed to perforate the Drinkard from 6317 to 6485, and when you did the physical work, you perforated from 6288 to 6484. Our interpretation of the log on this well indicates the Drinkard top to be at 6314, and your perforations, 6288, 6298, and 6308, are outside the vertical limits of the Drinkard Pool.

No approval for the dual completion application can be given, nor any allowable assigned to the Drinkard in this well until these perforations are either squeezed or isolated by a packer below the interval, 6308 and above the next perforation at 6324.

Yours very truly,

OIL CONSERVATION COMMISSION

Mr. J. L. ...
P.O. Box 241
Hobbs, New Mexico

Attention: Mr. C. L. ...
Gentlemen:

As we have previously discussed, there are three perforations in your R. L. Ciffon No. 2 located in Unit 1 of Section 4, T-23-N, R-37-E, that are above the vertical limits of the Drinkard Pool. In your application to do this work, you stated that you proposed to perforate the Drinkard from 6317 to 6485, and when you did the physical work, you perforated from 6388 to 7484. Our interpretation of the log on this well indicates the Drinkard to be at 6314, and your perforations, 6317, 6388, and 6398, are outside the vertical limits of the Drinkard Pool.

No approval for this dual completion application can be given, nor any allow- this assigned to the Drinkard in Unit 1 until these perforations are either abandoned or abandoned by a packer below the interval, 6308 and above the zone, completion at 6394.

Yours very truly,
OIL CONSERVATION COMMISSION
