

NEW ICO OIL CONSERVATION COM. ION
Santa Fe, New Mexico

MISCELLANEOUS REPORTS ON WELLS

Submit this report in triplicate to the Oil Conservation Commission or its proper agent within ten days after the work specified is completed. It should be signed and sworn to before a notary public for reports on beginning drilling operations, results of shooting well, results of test of casing shut-off, result of plugging of well, and other important operations, even though the work was witnessed by an agent of the Commission. Reports on minor operations need not be signed and sworn to before a notary public. See additional instructions in the Rules and Regulations of the Commission.

Indicate nature of report by checking below:

REPORT ON BEGINNING DRILLING OPERATIONS		REPORT ON REPAIRING WELL	
REPORT ON RESULT OF SHOOTING OR CHEMICAL TREATMENT OF WELL		REPORT ON PULLING OR OTHERWISE ALTERING CASING	
REPORT ON RESULT OF TEST OF CASING SHUT-OFF	6"	REPORT ON DEEPENING WELL	
REPORT ON RESULT OF PLUGGING OF WELL			

Hobbs, New Mexico Sept 10th 1937.

1. *Chlorophyll a* and *Chlorophyll b* were determined by the method of Lichtenthaler and Sponholz (1980). The total chlorophyll content was determined by the method of Arar and Cook (1980). The carotenoid content was determined by the method of Lichtenthaler and Sponholz (1980). The total phenolic content was determined by the method of Singleton and Rossi (1965). The total flavonoid content was determined by the method of Zhishen et al. (1999). The total protein content was determined by the method of Lowry et al. (1951). The total lipid content was determined by the method of Folch et al. (1957). The total carbohydrate content was determined by the method of Dubois and Gilles (1950). The total ash content was determined by the method of AOAC (1990). The total acid content was determined by the method of AOAC (1990). The total base content was determined by the method of AOAC (1990). The total nitrogen content was determined by the method of Kjeldahl (1950). The total phosphorus content was determined by the method of Molybdenum blue (1950). The total potassium content was determined by the method of Flame photometry (1950). The total calcium content was determined by the method of Atomic absorption spectrophotometry (1950). The total magnesium content was determined by the method of Atomic absorption spectrophotometry (1950). The total iron content was determined by the method of Atomic absorption spectrophotometry (1950). The total zinc content was determined by the method of Atomic absorption spectrophotometry (1950). The total copper content was determined by the method of Atomic absorption spectrophotometry (1950). The total manganese content was determined by the method of Atomic absorption spectrophotometry (1950). The total cobalt content was determined by the method of Atomic absorption spectrophotometry (1950). The total nickel content was determined by the method of Atomic absorption spectrophotometry (1950). The total selenium content was determined by the method of Atomic absorption spectrophotometry (1950). The total iodine content was determined by the method of Atomic absorption spectrophotometry (1950). The total bromine content was determined by the method of Atomic absorption spectrophotometry (1950). The total fluorine content was determined by the method of Atomic absorption spectrophotometry (1950). The total chlorine content was determined by the method of Atomic absorption spectrophotometry (1950). The total sulfur content was determined by the method of Atomic absorption spectrophotometry (1950). The total oxygen content was determined by the method of Atomic absorption spectrophotometry (1950). The total hydrogen content was determined by the method of Atomic absorption spectrophotometry (1950). The total carbon content was determined by the method of Atomic absorption spectrophotometry (1950). The total nitrogen content was determined by the method of Atomic absorption spectrophotometry (1950). The total phosphorus content was determined by the method of Atomic absorption spectrophotometry (1950). The total potassium content was determined by the method of Atomic absorption spectrophotometry (1950). The total calcium content was determined by the method of Atomic absorption spectrophotometry (1950). The total magnesium content was determined by the method of Atomic absorption spectrophotometry (1950). The total iron content was determined by the method of Atomic absorption spectrophotometry (1950). The total zinc content was determined by the method of Atomic absorption spectrophotometry (1950). The total copper content was determined by the method of Atomic absorption spectrophotometry (1950). The total manganese content was determined by the method of Atomic absorption spectrophotometry (1950). The total cobalt content was determined by the method of Atomic absorption spectrophotometry (1950). The total nickel content was determined by the method of Atomic absorption spectrophotometry (1950). The total selenium content was determined by the method of Atomic absorption spectrophotometry (1950). The total iodine content was determined by the method of Atomic absorption spectrophotometry (1950). The total bromine content was determined by the method of Atomic absorption spectrophotometry (1950). The total fluorine content was determined by the method of Atomic absorption spectrophotometry (1950). The total chlorine content was determined by the method of Atomic absorption spectrophotometry (1950). The total sulfur content was determined by the method of Atomic absorption spectrophotometry (1950). The total oxygen content was determined by the method of Atomic absorption spectrophotometry (1950). The total hydrogen content was determined by the method of Atomic absorption spectrophotometry (1950). The total carbon content was determined by the method of Atomic absorption spectrophotometry (1950).
