DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Operator proposes to pull tubing and packer and perforate Queen Sand from 3435' - 3450' and 3450' - 3495', rerun tubing with packer set at 3550' and then acidize Queen perforations through side-door choke in tubing at approximately 3475'. Swab well to completion and close side-door choke. Kick Grayburg off through perforations 3705' to 3722' and produce through tubing with Queen Sand gas producing through tubing-casing annulus.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
