(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

The pay section is from 3705 to 3760. The 5 1/2" casing is set at 3550'. We propose to plug back from the total depth of 3771 to 3695 with 9 sacks of cement, fill from there back to inside the pipe @ 3530 with gravel, set a 3 sack plug then fill to the top with E-Z mix mud. We will plug the top and set a standard 4" marker. The work will probably be done on March 3, 1954 but we will notify your office the day before the work is done.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
