(INDICATE ABOVE BY CHECK MARK NATURE OF REPORT, NOTICE, OR OTHER DATA)

Hobbs, New Mexico. January 9, 1945

Well No. 1 is located 1980 ft. from N line and 1980 ft. from Ex line of sec. 9

NW 1/4 section 9 22S 37E N.P.M.
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
Penrose Lea New Mexico
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill this test to beds of lower Ordovician, We will set and cement approximately 1300' of 13-3/8" forty eight pound casing in a 17" hole and circulate until cement returns to surface. We will cement 9-5/8" thirty six pound casing in a 12" hole at approximately 4200' with sufficient cement to fill back to base of salt. We will set and cement approximately 10,000' of 7" casing in an 8-7/8" hole with a minimum of 500 sax. This string will be composed of 3500' of 26# N-80 and 6500' of 23# N-80. If when total depth is reached it becomes advisable to set and cement casing on bottom and gun-perforate for testing purposes we will submit a supplemental request for approval of change in cementing program on the 7" casing.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
