Well

is located 554 ft. from [N] line and 2084 ft. from [W] line of sec. 9

228 378 N.M.P.M.

Las (County or Subdivision)

New Mexico (State or Territory)

The derrick floor above sea level is _____ ft.

DETAILS OF WORK

(Sign nature of and expected depths to objectives; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill this test with rotary tools to a depth of approximately 2000', or through the Ellenberger section.

We propose to set approximately 150' of 13-3/8" forty eight casing in a 17" hole and cement back to surface. We will set approximately 2000' of 9-5/8" thirty six pound casing and cement with 100% of the calculated amount of cement necessary through the salt section. We will set 23 7" casing through the Ellenberger, or on bottom of the hole, and gun perforate opposite the indicated pays after allowing cement to set. We will cement the casing with 750 sacks.

Indicate that this plan of work must receive approval in writing by the Geological Survey
