(County or Subdivision)

New Mexico
(State or Territory)

The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We plan to drill this test to a depth of approximately 6550' with rotary tools throughout.

We will set 150' of 13-3/8" surface casing and cement same to surface. We will set approximately 2800' of 32# 8-5/8" casing and cement with 1000 sacks. We will set and cement 5 1/2" casing on bottom with 450 sacks.

We plan to perforate casing opposite the pay section and produce well through perforations.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.

Company *N. G. Penrose, Inc.*

Address *1814 Fair Building*

Ft. Worth, Texas.
