Date

OIL CONSERVATION COMMISSION,
Santa Fe, New Mexico.

Gentlemen:

Following is a notice of intention to do certain work as described below at the

Rowan Drilling Company Elliott Well No. 3-B-9 in NW 1/4 of NW 1/4
Company or Operator Lease

of Sec. 9, T. 22-S, R. 37-E, N. M. P. M., Branson Field.
Lee County.

FULL DETAILS OF PROPOSED PLAN OF WORK

FOLLOW INSTRUCTIONS IN THE RULES AND REGULATIONS OF THE COMMISSION

In an effort to eliminate the 65% water being produced by this well we propose to plug this well back from T.D. of 8189' to 8100' with approximately 250 sacks of cement in two stages utilizing Baker Drillable Cement Retainers. A 3' Plastic Cap will then be placed on top of the cement plug in an effort to forestall the encroachment of water around the cement plug.

We then propose to perforate and squeeze this well at the top and bottom of the Middle Paddock Zone in an effort to decrease the water being produced by our Elliott 3-B-9, a twin well producing from the Paddock Zone. The Drinkard Zone will also be squeezed in this manner to eliminate any channel behind the pipe from conducting water in the event a Drinkard Zone well is drilled at some future date.

This well was completed on January 15, 1946. Water production has steadily increased to the extent that it is felt increased production of water will damage the well.

APR 28 1947
