## SOUTHEAST NEW MEXICO PACKER LEAKAGE

- INSTRUCTIONS
- A packer leakage test shall be commenced on each multiply completed within seven days after actual completion of the well, and summally eafter as prescribed by the order authorizing the multiple completion. tests shall also be commenced on all multiple completions within seven following recompletion and/or chemical or fracture treatment, and whenemedial work has been done on a well during which the procur or the ng have been disturbed. Tests shall also be taken at any time that comcation is suspected or when requested by the Commission.
- At least 72 hours prior to the commencement of any packer leakage test operator shall notify the Commission in writing of the exact time the is to be commenced. Offset operators shall also be so notified,
- 3. The packer leakage test shall commence when both zones of the dual completion are shut-in for pressure stabilization. Both zones shall remain shut-in until the well-head pressure in each has stabilized and for a winder shut-in more than 24 hours.

  4. For Flow Test No. 1, one zone of the dual completion shall be produced at the normal rate of production while the scher zone remains soften. Such test shall be continued until the flowing wellhead pressure has recome stabilized and for a minimum of two hours thereafter provided stweeter, that the flow test need not continue for more than 24 hours.
- of Flow Test No. 1, the well shall again be shut-bragraph 3 acove.
- Then Tes. No. 2 shall be one tested even though no leak was indicated ing Flow Test No. 1. Procedure for Flow Test No. 2 is to be the same for Flow Test No. 1 except that the previously produced zone shall remain shuthin while the previously shuthin zone is produced.
- 7. All pressures, throughout the entire test, shall be continuously measured and recorded with recording pressure gauges, the accuracy of which must be checked with a deadweight tester at least twice, once at the beginning and once at the end, of each flow test.
- 8. The results of the above-described tests shall be filled in triplicate within to dark after completion of the test. Tests shall be filled in triplicate within to dark after completion of the test. Tests shall be filled with the appropriate District Office of the New Mexico Cil Conservation Conservation of Southeast New Mexico Phoker Leakage Test form Revise 11 1-58, regether with the original tressure recording gauge charts with all the original tressure recording gauge charts with all the original tressure recording gauge charts with all the original tressure recording gauge charts with a conservation of the conser
