Re: Mechanical repairs to E. W. Walden #2
Unit K, 15-22-37, as result of packer
leakage test.

Gentlemen:

Amerada Hess Corporation moved on referenced well, set blanking plug at 6197' isolating Drinkard zone csg. perfs. fr. 6262' to 6376', and attempted to pressure test tbg. w/no results. When tbg. was pulled and laid down, it was determined to have it inspected and both strings of tbg. were trucked to Odessa. Not having enough tbg. to replace both strings, the blanking plug was left at 6197' and replacement tbg. was run, & Blinebry zone was swabbed in and resumed production until tbg. can be returned and re-run.
