" Describe the proposed program. If this application is to DEEPEN or PLUG BACK give the data on the present productive zone and proposed new productive zone. Describe the blowout prevention program, if any. Use additional sheets if necessary.

This well is currently producing from the Tubb (6000 - 6180') and the Drinkard (6273 - 6383) zones. We propose to recompleate into the Blinebry by setting a CIBP at 6250' with 35' cement on top and setting a CIBP at 5985' with 35' of cement on top. We will test the casing and CIBP. We then plan to perforate the Blinebry from 5458 - 5894, treat, test, and produce as an economical well.
