New Mexico Oil Conservation Commission (2)
Post Office Box 2045
Hobbs, New Mexico

Gentlemen:

We forward herewith revised schematic diagram for the dual completion of our Elliott B-15 No. 3. This well was previously dually completed in the Drinkard and Tubb formations so that the Drinkard was produced through the tubing and the Tubb produced through the annulus between the tubing and casing.

In order to facilitate the removal of liquid from the Tubb formation, we have exchanged 2" tubing for the 2-1/2" tubing for the Drinkard formation and have added a 2" siphon string for the Tubb formation.

Yours very truly,

J. R. PARKER
District Superintendent
of Production

JRP-DFW
Enc.
