| <input type="checkbox"/> Beginning Drilling Operations | <input type="checkbox"/> Casing Test and Cement Job | <input checked="" type="checkbox"/> Other (Explain): |
| <input type="checkbox"/> Plugging | <input type="checkbox"/> Remedial Work | Plugging between surface and production casing strings. |

Detailed account of work done, nature and quantity of materials used, and results obtained.

On the above well, the production casing string is supported at the surface by a casing clamp around the production casing and setting on the surface casing. There is no bradenhead.

A seal has been provided between the two casing strings by stuffing burlap sacks down between the two casing strings approximately 4'. Then, 1' of gravel was dumped on the bridge and 3' of cement placed on top of the gravel. A 1" pipe was placed through the burlap sack bridge to allow for checking pressure build-up between the casing strings.

Witnessed by Herb Henderson	Position Foreman	Company Ambassador Oil Corporation
