THE TREATMENT OF TUBERCULOSIS

By J. H. HARRIS, M.D., and J. H. HARRIS, M.D.,
of the University of Chicago, Chicago, Ill.

Read at the meeting of the American Medical Association, held at the Hotel
Macon, Chicago, Ill., September 1, 1917.

THE treatment of tuberculosis has been the subject of much discussion
and controversy in recent years. The various methods of treatment
which have been proposed have been based upon different theories of the
disease and its causation.

The purpose of this paper is to present a summary of the various
methods of treatment which have been proposed, and to discuss the
relative merits of each.

The first method of treatment which has been proposed is the
use of rest and fresh air. This method is based upon the theory
that the disease is caused by a deficiency of oxygen in the blood.

The second method of treatment which has been proposed is the
use of cod liver oil. This method is based upon the theory that the
disease is caused by a deficiency of vitamin D in the body.

The third method of treatment which has been proposed is the
use of sunlight. This method is based upon the theory that the
disease is caused by a deficiency of ultraviolet light in the body.

The fourth method of treatment which has been proposed is the
use of surgery. This method is based upon the theory that the
disease is caused by a localized infection in the lungs.

The fifth method of treatment which has been proposed is the
use of chemotherapy. This method is based upon the theory that the
disease is caused by a specific microorganism.

The sixth method of treatment which has been proposed is the
use of radiation. This method is based upon the theory that the
disease is caused by a deficiency of radiation in the body.

The seventh method of treatment which has been proposed is the
use of diet. This method is based upon the theory that the
disease is caused by a deficiency of certain nutrients in the diet.

The eighth method of treatment which has been proposed is the
use of exercise. This method is based upon the theory that the
disease is caused by a deficiency of physical activity in the body.

The ninth method of treatment which has been proposed is the
use of massage. This method is based upon the theory that the
disease is caused by a deficiency of circulation in the body.

The tenth method of treatment which has been proposed is the
use of acupuncture. This method is based upon the theory that the
disease is caused by a deficiency of energy in the body.

The eleventh method of treatment which has been proposed is the
use of hypnosis. This method is based upon the theory that the
disease is caused by a deficiency of mental activity in the body.

The twelfth method of treatment which has been proposed is the
use of psychoanalysis. This method is based upon the theory that the
disease is caused by a deficiency of emotional activity in the body.

The thirteenth method of treatment which has been proposed is the
use of psychotherapy. This method is based upon the theory that the
disease is caused by a deficiency of psychological activity in the body.

The fourteenth method of treatment which has been proposed is the
use of psycho-surgery. This method is based upon the theory that the
disease is caused by a deficiency of psychological activity in the body.
