Humble Oil & Refining Company  
 Company or Operator  
 By [Signature]  
 Position Division Superintendent  
 Send communications regarding well to  
 Name J. W. House  
 Address Box 1600, Midland, Texas

## THEORY OF THE EARTH AND ITS HISTORY

### CHAPTER I. THE EARTH AND ITS HISTORY

The Earth is a planet of the solar system, and its history is the history of the solar system. The solar system is a system of celestial bodies, including the Sun, the planets, the moons, and the comets, which are all bound together by the force of gravity. The Sun is the central body of the solar system, and it is the source of the energy that powers the planets. The planets are the bodies that orbit the Sun, and they are the most prominent members of the solar system. The moons are the bodies that orbit the planets, and they are the most prominent members of the planetary systems. The comets are the bodies that orbit the Sun in highly elliptical orbits, and they are the most prominent members of the solar system. The history of the solar system is the history of the formation and evolution of these celestial bodies, and it is a subject of great interest to scientists and the general public alike.
